a
Context association: complexes vs matched sets
Real complexes
Sets from other complexes
Coherent sets, no complex
Essentiality-only sets
Fraction of tests with p < 0.05
0.05
H3a units with coherent sets
H3a units with ess.-only sets
H3b units with coherent sets
H3b units with ess.-only sets
b
'Beats all matched sets', conditional on discovery
1/11 (no selection)
Real discoveries that beat all 10 matched sets
H3a lineage, pooled
H3b driver/state, pooled
Random-atlas discoveries that beat all others in their group (selection-aware reference)
c
Orthogonal RNAi check of H3a strongest findings
Leads: 29/35 same sign, Spearman 0.86
All: 157/194 same sign, Spearman 0.65
β in A, DEMETER2 (RNAi)
Other H3a strongest findings
Revised leads, same sign
Revised leads, opposite sign
β in A, CRISPR (Chronos)
d
BRIDGE-L: observed vs power-expected
Size-standardised Δ (zavg − GLS):
observed -0.065, expected -0.023 (SD 0.019)
BRIDGE-L confirmation rate
zavg map: observed
zavg map: expected from power
GLS map: observed
GLS map: expected from power
3-4
5-8
9-16
17-60
Cluster size bin (genes)
